Follow the steps below to update firmware:

Extract the **G3AD_UPD.ROM** file from the update package and copy to the root of an USB flash drive, then connect the USB drive to the Gateway 300 Peugeot CAN while it is powered If there is an iPod connected to Gateway you can leave as it is in any playback mode or status, do not need to disconnect or stop playback.

Update procedure will start automatically within few seconds and takes approximately 1 minute. **Do not disconnect the USB drive within this time**. During the update head unit (car stereo) turns to tuner mode and Gateway restarts.

When finished, change source to CD Changer to use the Gateway again.

After a successful update G3AD_UPD.ROM is deleted from the USB flash drive and GW_EES.BIN file will appear with the new software version.

For more information read Knowledge Base or contact Dension Support.

Please note:

This firmware update was created only for the Gateway 300 Peugeot CAN (**GW33PC1**).
